JESSIE CHEN (Yi Qi)

Chicago, IL · jessiechenyiqi@outlook.com · github.com/jessieyiqichen · Portfolio

SUMMARY

Product manager with an economics background. Shipped a content module to 300K daily UV as a PM intern and built two AI products end to end, including their evaluation sets and cost accounting. Defines the success metric before building.

EDUCATION

The University of Chicago — Chicago, IL

M.A. in Computational Social Science — Economics Track — Sep 2025 – Jul 2027 (Expected)

- GPA: 4.0/4.0 | Phoenix Research Scholarship, 2025–2026

The Chinese University of Hong Kong — Hong Kong, China

B.Soc.Sc. in Economics — Sep 2021 – Jul 2025

- GPA: 3.76/4.0 | Dean's List, Head's List, Academic Excellence Scholarship, 2024–2025

PROFESSIONAL EXPERIENCE

Droi Technology — Shanghai, China

Product Management Intern — Freeme OS Desktop Content App — Jul 2026 – Sep 2026

Pre-installed Freeme OS content app for lower-tier markets; goals: user time and ad revenue

- **Comic-Drama Module 0→1:** Owned a new content module from proposal to launch with engineering and design. Validated demand with existing short-drama data and CDN-vs-ad economics; chose "content API + in-house pages" over SDKs. Shipped 8 PRD versions; full rollout in two weeks reached 300K daily UV, ~13% of OS DAU.
- **Desktop Re-engagement Revenue:** Diagnosed a re-engagement slot with clicks but no CPA revenue: cross-checked app opens against attribution and found missing billing configs, not weak recommendations. Fixed configs and added "installed but never opened" targeting: click-to-activation 0.7% → 1.5%, top-app activations +40%, tens of thousands RMB added monthly.
- **AI Assistant Quality Diagnosis:** Built a 30-question eval set for a live AI assistant with no quality metrics: 12.5% intent-routing accuracy, 44% call failure rate. Traced failures to unread error codes that silently disabled the vendor fallback; fixes scheduled.
- **AI Data Workflows:** Codified 4 recurring workflows (PRD, prototyping, monetization proposals, bug triage) into AI workflows with decision criteria and self-checks, and connected the data platform via MCP for in-chat queries: analysis time cut from 4–5 days to 1–2, adopted by all 7 team members.

PROJECTS

Lecture Companion — Real-Time AI Lecture Assistant [Live Demo] — Independent Developer, Jun 2026 – Present

Real-time assistant for online lectures: click a transcribed sentence to get an AI explanation with context and screen capture.

Python · Multimodal RAG · Streaming ASR · LLM API · Next.js · SQLite

- **Zero-Input Question Capture:** Asking in online lectures is blocked by input friction, not model capability. Reduced asking to one click on a transcribed sentence, auto-attaching source text, context, and screen capture: 63 marks across 9 sessions, 93.7% with zero typing.
- **North-Star Redesign:** Redefined the north star from marks per hour to marks reviewed after class, where the value lands. First reading was 0, so paused retrieval work and rebuilt the review page around re-watch and self-test aligned with exam weeks; 108 review entries since.
- **Agent Trade-off Experiment:** Blind-tested single-pass vs. multi-round agentic retrieval: 1.8× time, 1.3× cost, no perceptible quality gain, so shut down the deep-dive agent. The same test approved the quiz-tutor agent; per-turn latency 141 s → 6–8 s.

xhs-threads — Thinking Trails from Xiaohongshu Bookmarks [Live Demo] — Independent Developer, Jun 2026 – Present

Turns Xiaohongshu bookmarks into threads of the user's own thinking, with no manual tagging; in use by one external tester.

Python · Model Tier Routing · Rubric-Based Eval · launchd · Vercel + Alibaba Cloud

- **Zero-Annotation Archival & Need Calibration:** Built zero-annotation archiving for Xiaohongshu bookmarks: users save as usual, the system threads saves by topic, distills the idea behind each, and quality-checks it; 10 threads, 47 nodes. First external tester completed the full flow and kept using it.
- **Trustworthiness Mechanism:** After the model fabricated user experiences from adjacent bookmarks, set a "no direct source, no publish" rule adjudicated by majority vote of 3 independent models: all 7 fabricated samples blocked, accepting 8 false rejections out of 28 normal items.
- **Model Tiering & Cost Ledger:** Routed classification to a lightweight model tier and summary writing to the flagship tier, with auto-escalation on failure; ~90% of calls land on the light tier under one quality gate. Per-call token accounting identified classification as the main cost driver.

SKILLS

- **AI & Product Engineering:** AI Evaluation, Multimodal RAG, Agent Workflows, Prompt Engineering, MCP, Model Routing
- **Data & Research:** SQL, Causal Inference, Econometric Modeling, Machine Learning, NLP
- **Languages:** Mandarin (Native), English (IELTS 7.5), Cantonese (Intermediate)
